Examination Report

Case Information

Case Number	111
Case Date	12/07/2024
Examiner Name	Yaman Albacha
Agency	UWE Cyber Security and Digital Forensics BSc (CSDF)
Description	On October 26, 2022, Beth, a high school student, was forcibly abducted outside her school premises by unknown assailants. The perpetrators employed chloroform and transported her in a black van to an abandoned location, where they demanded a ransom of £50,000 from Beth's family. The ransom was paid, and Beth was released unharmed on October 28, 2022.
	The investigation into this case primarily focused on digital forensic analysis of a suspect's computer system, aimed at uncovering evidence pertinent to the kidnapping. The forensic examination utilized EnCase and Autopsy tools to analyze a forensic image of the suspect's computer, named mouse_hunter.E01.
	Key objectives included identifying communication channels used by the kidnappers, analyzing digital artifacts related to the ransom demand, and tracing any digital footprints that could lead to the identification of the perpetrators. The investigation aimed to provide actionable intelligence to law enforcement agencies for further pursuit of justice in the case.
